NCTU Pattern Recognition, Homework 5

Deadline: June 23, 23:59

Coding (100%):

In this coding assignment, you need to implement the deep neural network by any deep learning framework, e.g. Pytorch, TensorFlow, or Keras, then train the DNN model by the Cifar-10 dataset and try to beat the baseline performance.

Download dataset HERE.

Please note that you should only train and evaluate your model on the provided dataset. **DO NOT** download the data from other resources.

If you are a newbie in a deep learning framework, we recommend you learn **Keras** or **Pytorch**.

- Pytorch tutorial
- Keras tutorial
- TensorFlow tutorial
- 1. (100%) Show your accuracy of your model on the provided test data by screenshot the results of your code and paste them on your report

Evaluation:

Accuracy	Your scores
acc >= 0.95	100 points
0.9 <= acc < 0.95	90 points
0.80 <= acc < 0.90	80 points
0.75 <= acc < 0.80	70 points
0.65 <= acc < 0.75	60 points
0.6 <= acc < 0.65	50 points
acc <0.6	No points

Note: Keyword to boost your model performance

- 1. Data augmentation
- 2. Hyperparameter searching for model structure (number of filers, number of convolution/dense layer) and optimizer (learning rate)
- 3. Regularization

Note: If your result is bad, check this tutorial first to debug your model
